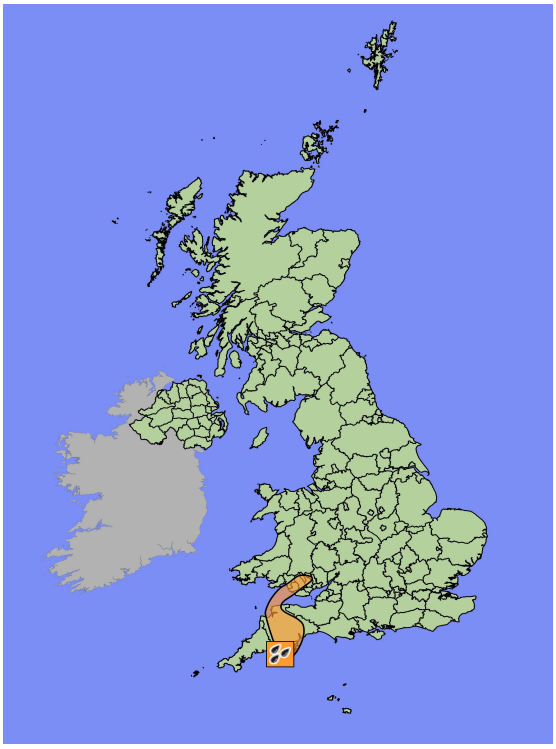
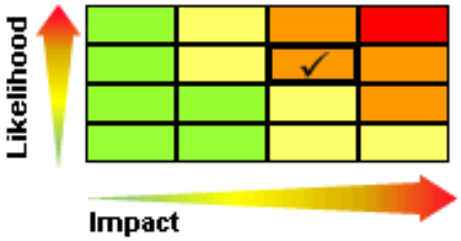
National Severe Weather Warning Service





Chief Forecasters Assessment
A very deep area of low pressure will pass close to northwestern UK on Tuesday, bringing a spell of wet and windy weather. The heaviest and most persistent rain is expected to be over Wales and southwest England. Accumulations of 20 to 30 mm are expected quite widely, especially over higher ground, with locally in excess of 50 mm over some hills and mountains. The heavy rain will also be accompanied by strong winds which could reach gale force around exposed coasts and over hills and moors.

The Met Office have issued an **Amber Warning** of **Rain**

Valid from **00:05 on Tue, 29th Jan 2013** until **23:55 on Tue, 29th Jan 2013**

Further rain will spread northeastwards across Wales and South West England early on Tuesday, becoming heavy and persistent in places before clearing again overnight. Given saturated ground, the public should be prepared for further localised flooding and disruption to travel, particularly in parts of Devon and South Wales.

This is an update to the warning issued on Sunday morning.
